

Pan-Autoimmune Protein Array 1.0

Expedite discovery of biomarker signatures with a pre-selected pool highly enriched for autoantigens associated with autoimmune diseases

110 Autoimmune Disease-Related Antigens

Pan-Autoimmune Array Proteins

- Screen from a pool of well-defined, disease relevant candidate autoantigens.
- Harvest more data from each experiment - profile 110 autoantibodies from just microliters of sample.
- Have confidence that with the combination of our patented KREX protein folding technology, our highly trained technicians and expert bioinformaticians, your data will be of the highest quality, reproducible and actionable.
